TITLE:	Compositions for treating shoes and methods and articles employing same

---

Detail Description Paragraph - DETX (294):

[0333] In order to achieve conditioning of shoe surfaces, especially leather-containing shoe surfaces, it is desirable to use one or more conditioning agents within the shoe treating process. The use of the conditioning agent(s) can independently occur prior to washing the shoes in an aqueous medium (pre-treatment) and/or during washing of the shoes in an aqueous medium, preferably during the wash cycle rather than the rinse cycle in automatic washing machines (automatic clothes washing machines) and/or after washing the shoes in an aqueous medium (post-treatment). Additionally, one or more conditioning agents can be applied to one or more "new" shoes in order to condition the shoes for preventative and/or comfort reasons, among others.

Detail Description Paragraph - DETX (318):

[0357] Conditioning agents can be applied either as part of the cleaner (2 in 1) or added separately. When applied separately, the conditioning agents can be added as a pre-treat composition which is applied to one or more surfaces of a shoe, either inside or outside the shoe, preferably to an inside surface of the shoe, prior to washing. Further, one or more conditioning agents may be applied to one or more surfaces of a shoe via a wash solution ("Through the Wash") containing the conditioning agents. Further yet, one or more conditioning agents may be applied to one or more surfaces of a shoe after washing the shoe (post-treat).
